How to Increase Access of Migrants to TB Diagnosis & Treatment in Kazakhstan?

B. Bohlumunov, Z. Z. Ismailov, B. Trusov, P. Zhambekova, Zh. Zhambekova, N. Osmanova, I. Kuzabayev, H. Shmeleva
Project HOPE, Astana, Kazakhstan, National Center of Tuberculosis Problem, Almaty, Kazakhstan.

Labor Migrants Lacked Access to TB Services

In Kazakhstan, one of the world’s highest MDR-TB burden countries, the large influx of labor migrants lacked access to TB services due to lack of information and legal, financial, and language barriers. In 2014, Project HOPE began a GFATM-funded program in 7 pilot sites.

Key Interventions to Reach Migrants with TB Services

- Network of Migrant-Friendly Health Facilities
- Information Channels via NGOs, government, & mass media
- Migrant Outreach & Referral System

Results

- Screening increased from 1,710 in 2015 to 15,183 in 2016
- Reach increased fourfold from 11,991 in 2015 to 47,488 in 2016
- 72% of all external migrants with TB in Kazakhstan were detected in program pilot regions in 2016

5-Fold Increase in TB Detection Among External Migrants (2014-2016)

76% Treatment Success Among External Migrants

Recommendations:

* Reach migrants where they are
* Use different channels to disseminate information
* Establish a network of migrant-friendly facilities
* Engage partnerships for reach & sustainability
* Establish regional trans-border cooperation on TB control and treatment
