

We Are Project HOPE

www.projecthope.org | [@projecthopeorg](https://twitter.com/projecthopeorg)

For more than 60 years, Project HOPE has transformed the health and well-being of people around the world.

In the face of unprecedented challenges, we believe hope has the power to change lives — because we see it every day.

Project HOPE places power in the hands of local health workers to save lives around the world. Together with our partners, we're building a strong and resilient global community of health workers who practice innovative solutions in their communities and then pass them on to others.

Ending preventable deaths of mothers and newborns. Putting an end to AIDS and Tuberculosis. Strengthening health care systems to withstand disaster. Equipping doctors and nurses on the front lines of COVID-19.

That's what HOPE looks like.

Project HOPE at a Glance

- We have over 60 years' experience in more than 100 countries.
- Our medical programming leverages evidence-based solutions to combat the most pressing issues in global health.
- We respond to urgent health crises and emergencies to make a significant impact where we are needed most.
- We lead the way in health policy as publisher of Health Affairs, the leading journal of health policy thought and research.

Healing people. Transforming lives.

We envision a world where everyone has access to the health care they need to reach life's full potential through a strong and resilient global community of health care workers.

Our mission

We are a global health and humanitarian organization, committed to transforming lives and uplifting communities by empowering health care workers to expertly implement and teach innovative lifesaving solutions, in times of need and into the future.

In disaster, crisis and beyond, Project HOPE is there: providing direct health care services, equipping clinics and hospitals, training local health care workers, and delivering solutions that help people access the health care services they need.

Reproductive, Maternal, Neonatal & Child Health

We work to end all preventable deaths of mothers, newborns, and young children.

Infectious Diseases

We work to end the threat of infectious diseases like Tuberculosis (TB), HIV, and COVID-19 by helping at-risk communities improve detection and expand access to care, treatment, and support services.

Noncommunicable Diseases

We work to reduce premature mortality and address the rapidly growing risks of noncommunicable diseases (NCDs) worldwide — especially diabetes, hypertension, and respiratory diseases.

Disasters & Health Crises

We respond urgently to global health emergencies and help communities better prepare for the next time disaster strikes.

Health Policy

We explore the most pressing health policy issues through Health Affairs, the leading journal in health policy thought and research.
