

Responding to India's Devastating COVID-19 Wave

A second wave of COVID-19 devastated India last spring, pushing hospitals and health systems to the brink countrywide. At the peak of the wave, more than 400,000 people were contracting COVID-19 every day, with daily death rates soaring above 4,000.

Project HOPE rapidly mobilized medical equipment, oxygen, and PPE to help India's health care workers endure the wave. Even amid heartbreaking loss, Project HOPE was there to support the frontline health care workers, patients, and families in the moments that mattered most.

Thanks to you, our COVID-19 response in India:

Reached more than **178,000** people in **1,671** communities

Distributed more than **35,000** pieces of equipment, including **2,900** ventilators

Trained more than **4,700** health care workers

Rushing Support to Health Care Workers in Nepal

India's outbreak had devastating effects on Nepal's overwhelmed health system, which experienced a 4,000% increase in COVID-19 cases in a matter of weeks. Nepal faced critical shortages of medicines, beds, ventilators, oxygen, and PPE at the peak of the wave, with the border province of Lumbini especially hard hit. Project HOPE worked with local partners to distribute medical equipment like oxygen cylinders, oxygen concentrators, BIPAP machines, PPE sets, masks, ICU beds, and medical tents to support frontline health care workers in provinces across the country.

Thanks to you, our COVID-19 response in Nepal:

Delivered PPE and medical equipment to **13 hospitals** and **6 health care centers** in Lumbini Province

Trained more than **4,500** health care workers

Expanding Vaccine Equity in Texas

In Houston and McAllen, Texas, there are critical gaps in vaccine access that affect families in underserved, uninsured, and marginalized communities. Project HOPE is working with free and charitable clinics in Harris and Hidalgo counties to improve access to COVID-19 vaccines, combat misinformation, and vaccinate thousands of people.

Project HOPE's COVID-19 response in Texas:

Has provided free vaccines to **hundreds of Afghan refugees** in the Greater Houston Area

Will vaccinate more than **3,200** people in Houston and the Rio Grande Valley

Has engaged more than **70 partners** across East Texas

Will reach more than **30,000** people with COVID-19 outreach and education materials

11 community health care workers and vaccinators employed across **four free and charitable clinics**

Supporting Health Care Workers' Mental Health

Health care workers are among the most vulnerable to the mental health effects of the pandemic. More than half of those responding to COVID-19 have experienced mental health issues, with nurses and doctors reporting high rates of anxiety, depression, suicide, insomnia, and distress.

To address the toll of COVID-19 on mental health, Project HOPE is implementing mental health and resiliency trainings for frontline health workers worldwide. Originally piloted in the Dominican Republic and Indonesia, the training is expanding across five continents and reaching some of the world's most vulnerable communities.

Thanks to you, our COVID-19 mental health trainings will reach more than **50,000 health care workers** around the world.

Trainings are being offered in **15 languages**
