## IMPACT REPORT: SUPPORT FOR CIVILIANS IN ISRAEL

Since October 2023, Project HOPE has been responding to the health and humanitarian needs of civilians in Israel. Our team has distributed hygiene items to families displaced by the conflict, equipped health facilities damaged by the October 7 attacks with lifesaving medical equipment, and forged innovative mental health partnerships with local organizations. Project HOPE's response continues to focus on strengthening the capacity of the local health system, addressing mental health needs, and supporting displaced families.

## STRENGTHENING THE CAPACITY OF LOCAL HEALTH FACILITIES

Project HOPE provided critical medical equipment to four hospitals damaged during the October 7 attacks: Shamir Medical Center, Barzilai Medical Center, Hadassah Hospital, and Sheba Medical Center. Project HOPE continues to identify opportunities to strengthen capacity, repair damaged facilities, and equip local health workers with the tools they need to save lives.

## INNOVATIVE MENTAL HEALTH CARE PARTNERSHIPS

In collaboration with three local partners — the Yuri Shtern Holistic Center, NATAL: Israel Trauma and Resiliency Center, and Shamir Medical Center — Project HOPE has provided 891 people with access to stress management programs, urgently needed psychotherapy sessions, and an innovative hyperbaric oxygen treatment plan for those with treatment-resistant post-traumatic stress disorder (PTSD).

## 1,100 DISPLACED PEOPLE PROVIDED WITH DIGNITY ITEMS

In the aftermath of the October 7 attacks, families living in communities near Israel's borders were evacuated from their homes and internally displaced. With limited access to personal belongings, humanitarian needs quickly grew. Project HOPE responded by providing 1,100 people with hygiene items including toothbrushes, toothpaste, shampoo, deodorant, bedsheets, towels, and clothes.

## 1,350 PSYCHOSOCIAL SESSIONS PROVIDED TO CIVILIANS IN ISRAEL

Project HOPE's local partners in Israel have provided critical and potentially lifesaving psychosocial sessions to civilians affected by the conflict. As individuals cope with acute stress, PTSD, and the chaos of war, access to mental health services is crucial. Project HOPE's partners in Israel are often able to provide participants with multiple sessions, thus improving outcomes and ensuring quality of care.

## \$263,420 OF MEDICAL EQUIPMENT DELIVERED TO HEALTH FACILITIES

Project HOPE has delivered \$263,420 of lifesaving medical equipment to health facilities in Israel to ensure that health workers and patients have access to much-needed medical equipment, including generators, defibrillator monitors, bladder scanners, mobile ultrasound machines, wheelchairs, and shower seats for patients with spinal cord injuries.
